2

BEAU FORT

### Two light colours available

BEAUFORT^2 is available in two colour temperatures. You may opt for 3000K, which is a warm white light and perfect for the project market as general or accent lighting. Alternatively you may choose 2700K which provides more gentle light and therefore is more suitable for hospitality and residential applications.
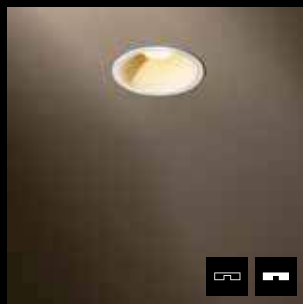

A++ Label

The Beaufort^2 technology is efficient to such extent that in fact it is one of the first light sources Europe has granted the A++ label. The Beaufort^2 module can be driven up to 500mA. At 500mA it will provide about 2000lumen, which comes down to an efficiency of more than 110lumen/W. Provided the Beaufort^2 module is driven at 350mA it will still provide 1500lumen, which equals an efficiency of 115lumen/W.
